YOUR HAIR COULD BE KILLING YOU! HAIR STRAIGHTENING PRODUCTS CAN CAUSE CANCER

Scientists are uncovering new details in the connection between using certain hair straightening products, such as chemical relaxers and pressing products, and an increased risk of cancer in women.

The study, published in the Journal of the National Cancer Institute, estimates that among women who did not use hair-straightening chemical products in the past 12 months, 1.6% developed uterine cancer by age 70, but about 4% of the women who frequently use such hair-straightening products developed uterine cancer by age 70.

MEDICAL CAMP IN SEEDUWA FOR THE SRI LANKA WELFARE SOCIETY OF THE BLIND

Durdans Hospital, through its Care Fund, conducted a medical camp for the visually impaired community in the Seeduwa area in addition to a donation of 50 white canes to the same organisation.

Around 300 visually impaired individuals attended the camp and were given general wellness checks, blood sugar tests and prescribed medications for minor ailments as well.
